12 <h1>natas1</h1>
13 <div id="content">
14 You can find the password for the
15 next level on this page, but rightclicking has been blocked!
16
17 <!--The password for natas2 is ZluruAthQk7Q2MqmDeTiUij2ZvWly2mBi -->
18 </div>
19 </body>
20 </html>
21
22
```

Right clicking blocked

To find another way to view the source page, press “Ctrl+U”

Then we find the password for natas2 is **【ZluruAthQk7Q2MqmDeTiUij2ZvWly2mBi】**

Time:~5 mins

Level 1 --> Level 2

In source page, i see there is a img tag.

After i click it, it go to another website

<http://natas2.natas.labs.overthewire.org/files/pixel.png>

It didn't show anything. Let's see what under the /files. Then i delete the pixel.png

I see there is another files "users.txt"

```
← → ↻ ⓘ Not secure | natas2.natas.labs.overthewire.org/files/users.txt

# username:password
alice:BYNdCesZqW
bob:jw2ueICLvT
charlie:G5vCkV3m
natas3:sJIJNW6ucpu6HPZ1ZAchaDtwD7oGrD14
eve:zo4mJWYnj2
mallory:9urtpczBmH
```

This might be the password, let's try

The password for natas3 is 【sJIJNW6ucpu6HPZ1ZAchaDtwD7oGrD14】

Time:~30mins

Level 2 --> Level 3

To view the source page, there is an weird sentence "Not even Google will find it this time.."

We know that Robots.txt is the first file to be viewed when accessing a website in a search engine.

It will tell the spider what files are viewable on the server.

Add robots.txt to the end of URL: <http://natas3.natas.labs.overthewire.org/robots.txt>

```
← → ↻ ⓘ Not secure | natas3.natas.labs.overthewire.org/robots.txt

User-agent: *
Disallow: /s3cr3t/
```

Then we can see that access to the directory under / s3cr3t / is prohibited

Let's try <http://natas3.natas.labs.overthewire.org/s3cr3t/>

```
← → ↻ ⓘ Not secure | natas3.natas.labs.overthewire.org/s3cr3t/users.txt

natas4:Z9tkRkWmpt9Qr7XrR5jWRkgOU901swEZ
```

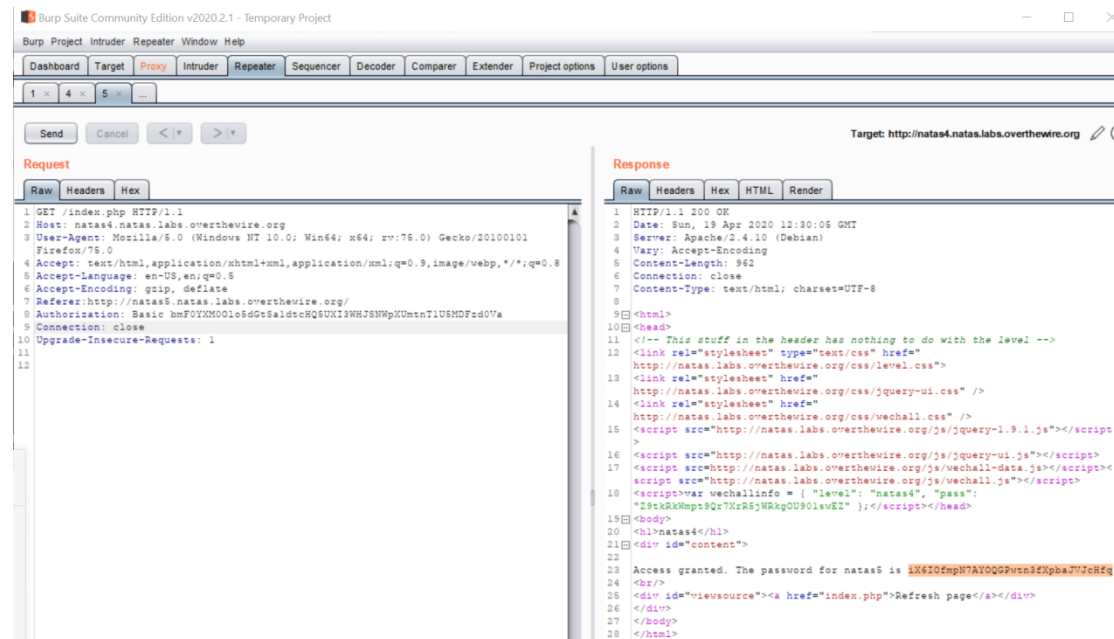

The password for natas4 is 【Z9tkRkWmpt9Qr7XrR5jWRkgOU901swEZ】

Time:~40 mins

Level 3 --> Level 4

This one is a little bit challenge for me. I need to think about How to trick the server that we come from natas5? It take me a long time to learn about referer, which is part of the HTTP request header. When the browser sends a request to the web server, the referer will tell the server which web page I came from. So i need to change the referer in order to trick the website. I open the

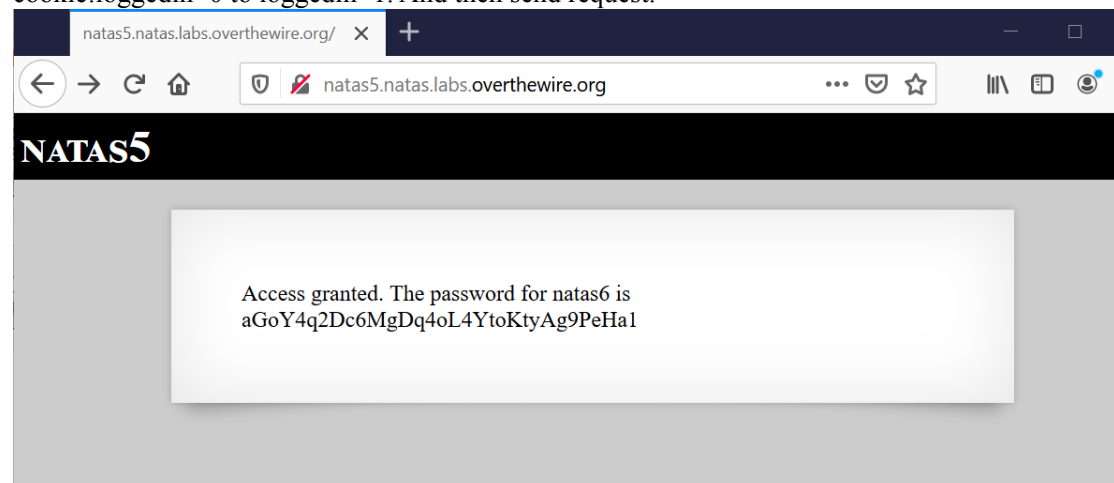

webpage in firefox, and then connecting to burp suite. Then I use burp to intercept the packet. And then change referer to <http://natas5.natas.labs.overthewire.org/>.

Access granted. The password for natas5 is **【iX6IOfmpN7AYOQGPwtn3fXpbaJVJcHfq】**
Time:~3 hours

Level 4 --> Level 5

Similar with last one. Trick the website we logged in. Use burp suite and then change cookie:loggedin=0 to loggedin=1. And then send request.

Access granted. The password for natas6 **【aGoY4q2Dc6MgDq4oL4YtoKtyAg9PeHa1】**
Time:~30 mins

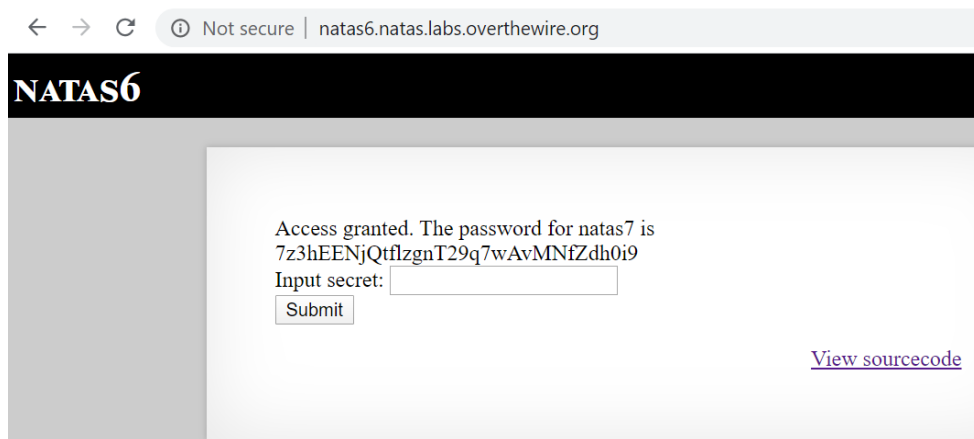

Level 5 --> Level 6

In the source code it looks like that the secret hide under “includes/secret.inc”

Let's check it out

<http://natas6.natas.labs.overthewire.org/includes/secret.inc>

```
← → ↻ ⓘ Not secure | natas6.natas.labs.overthewire.org/includes/secret.inc
<?
$secret = "FOEIUWGHFEEUHOFUOIU";
?>
```

After input the secret "FOEIUWGHFEEUHOFUOIU". I get the password for natas7 is
【7z3hEENjQtflzgnT29q7wAvMNfZdh0i9】
Time:~30 Mins

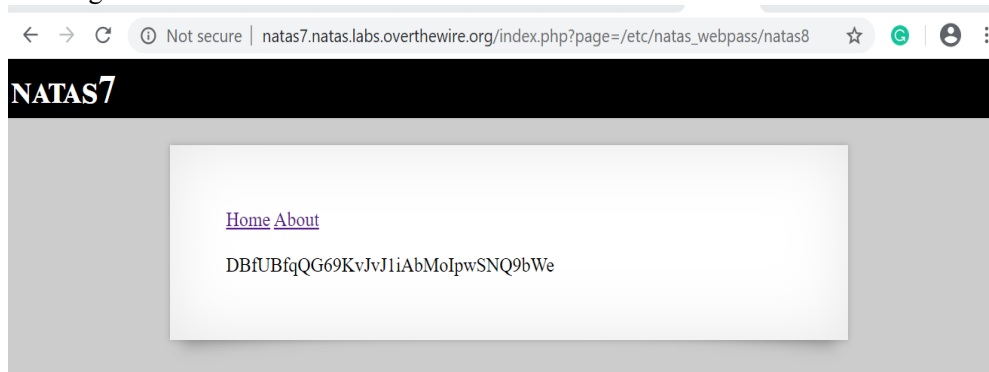

Level 6 --> Level 7

After click “Home” and “About”, I didn’t get anything
So go to the source page, I see a hint.

Let’s try

http://natas7.natas.labs.overthewire.org/index.php?page=/etc/natas_webpass/natas8

Then I get

The password for natas8 is 【DBfUBfqQG69KvJvJ1iAbMoIpwSNQ9bWe】

Time:~30 Mins

Level 7 --> Level 8

I see there is a “encodedSecret” in source code.

We might need to decoded the secret. Through the given function, to decode the secret, we need to base64 decoding it and then reversed, then convert it back to binary.

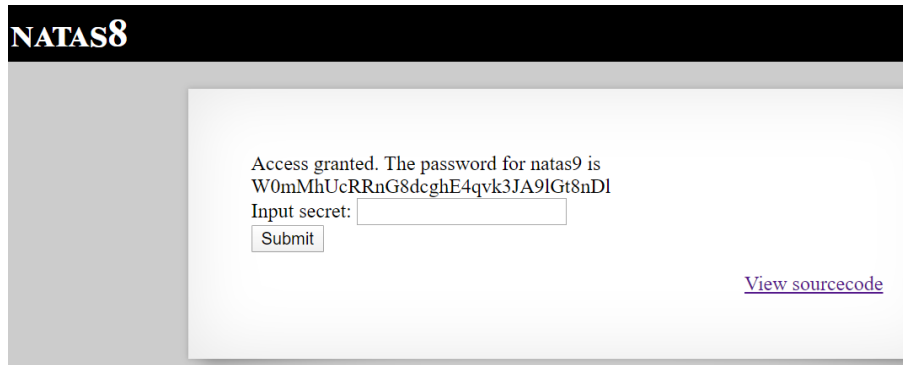

```
<?php
echo base64_decode(strrev(hex2bin('3d3d516343746d4d6d6c315669563362'))));

```

Run Code

oubWYf2kBq

Then I get “oubWYf2kBq”

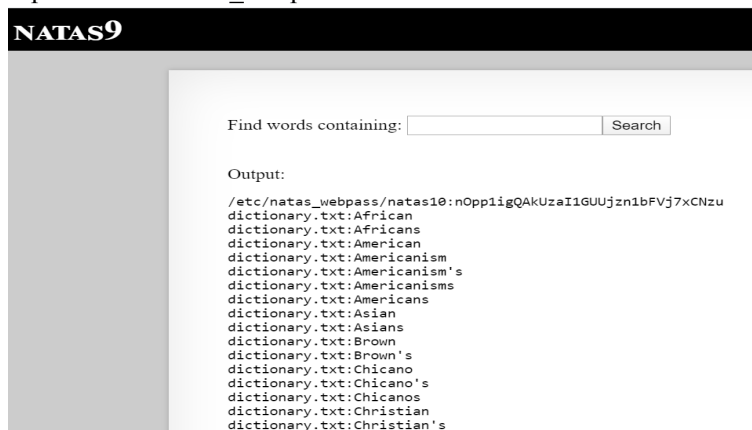

After input it. The password for natas9 is 【W0mMhUcRRnG8dcghE4qvk3JA9lGt8nDl】
Time:~ 1.5 hours

Level 8 --> Level 9

After reading the source code, we know that needle submits the parameters through the get request. If it is not empty, it will be taken to "grep -i \$ key dictionary.txt" for execution. So the code allows us to find words in the dictionary.txt file. I first type “\n” to see what is in this txt. A lot of things are returned, but we have to find what we need. In level 7, the passcode is located in /etc / natas_webpass. So I tried “\n / etc / natas_webpass / natas10”

Input: \n /etc/natas_webpass/natas10

I get the password for natas10 is 【nOpp1igQAkUzaI1GUUjzn1bFVj7xCNzu】
Time:~ 2 hours

Level 9 --> Level 10

This is very similar to the previous one, I try “\n / etc / natas_webpass / natas11” firstly . But I didn't see what I wanted. Then the sentence says filter on certain characters, and the code state that “; | &” are illegal character. So I try “[a-z] / etc / natas_webpass / natas11” next. (case does not matter)

Input: [a-z] / etc / natas_webpass / natas11

NATAS10

For security reasons, we now filter on certain characters

Find words containing:

Output:

```
/etc/natas_webpass/natas11:U82q5TCMMQ9xuFoI3dYX61s7OZD9JKoK
dictionary.txt:African
dictionary.txt:Africans
dictionary.txt:Allah
dictionary.txt:Allah's
dictionary.txt:American
dictionary.txt:Americanism
dictionary.txt:Americanism's
dictionary.txt:Americanisms
dictionary.txt:Americans
dictionary.txt:April
```

I get the password for natas11 is 【U82q5TCMMQ9xuFoI3dYX61s7OZD9JKoK】

Time:~30 mins
